linkedin.com/in/hartonohong

Software Developer with experience in .NET, ASP.NET Core, SQL Server, and system integration. Skilled in developing backend API services, stored procedures, data synchronization processes, monitoring pages, and business application features. Experienced in migrating legacy applications to .NET 8 and building microservice-based solutions. Interested in backend development, full-stack development, and building reliable applications that support business operations.

PROJECTS

Insurance Service (Internal Core APP)

- Designed and developed a new Insurance Service microservice to handle insurance cover-related processes, including backend API services and frontend implementation.
- Leveraged Codex Code throughout development for rapid UI code generation.
- Technologies: .NET 6, C#, SQLServer, Microservice, Swagger, RESTApi, Codex Code.

Monitoring App (Internal APP)

- Create a monitoring page to track unsynchronized data
- Leveraged Codex Code throughout development for rapid UI code generation.
- Technologies: .NET 8, C#, SQLServer, Vue, Swagger, Codex Code.

Console App (Internal APP)

- Developed an internal console application to automatically generate Word and PDF documents for memo creation in the company's EMemo web application.
- Migrated an internal console application from .NET Framework to .NET 8 to improve performance, maintainability, and long-term compatibility.
- Technologies: .NET Framework, .NET 8, C#, SQLServer.

Epayment (Internal Finance APP)

- Enhanced existing business processes in the internal E-Payment finance application.
- Developed new modules, including upload functionality and supporting finance-related workflows.
- Integrated the application with other internal systems to improve data flow and operational efficiency.
- Maintained and improved existing features to support daily finance operations.
- Technologies: .NET Framework, C#, SQLServer.

EXPERIENCES

IT Developer | PT. Mega Central Finance

Mei 2022 - Present

- Designed and developed a new Insurance Service microservice to handle insurance cover-related processes, including backend API services and frontend implementation.
- Migrated legacy console applications to .NET 8 to improve performance, maintainability, and long-term support.
- Implemented data synchronization between vendor applications and internal applications, including a monitoring page to track unsynchronized data.
- Developed stored procedures to automate data processing and improve overall performance.
- Identified and fixed bugs to improve application performance, stability, and reliability.
- Gathered user requirements and translated them into clear functional and technical designs.
- Collaborated with the Project Manager to clarify requirements, align priorities, and track development progress.
- Created and executed system testing to ensure the application works properly under normal business conditions.

IT MIS | PT. Mega Central Finance

Mei 2021 - June 2022

- Providing Data based on user's requests
- Developing Query based on user's requests
- Problem Solving based on user's requests

EDUCATION

Bunda Mulia University

2014 - 2018

Information System – Jakarta, Indonesia

SKILLS

- **AI & Automation:** GitHub Copilot, Claude (Opus, Sonnet), Claude Code, Gemini, Codex
- **Backend & Infrastructure:** .NET Framework, .NET Core, ASP.NET, Rest APIs, C#
- **Database & Storage:** SQLServer
- **IDEs:** Visual Studio, VS Code
- **Architecture & Practices:** RESTful APIs, Layered Architecture
